digital showering + bathing

## We're passionate about digital showering and bathing...

From design to despatch, we're proud of what we do and how we do it. At Aqualisa, we design and manufacture innovative showering and bathing solutions that are renowned for their power, performance and reliability.

Founded over 30 years ago, Aqualisa has always pioneered groundbreaking, original bathroom product design. In 1977, Aqualisa's thermostatic technology made headlines. Developed especially with the nuances of the domestic plumbing system in mind, it changed British bathrooms forever.

But time doesn't stand still and today, Aqualisa continues to be at the forefront of cutting edge showering and bathing with its extensive range of Digital showers and bath fills. Since introducing the concept of digital technology in 2001, digital showers and recently, digital bath fills have been embraced by the bathroom industry, installer and consumer alike.

But don't just take our word for it. To us, innovation is part of our culture and Aqualisa's revolutionary products have collected a range of awards including those from the Design Business Association, Homes & Gardens Magazine, CORGI and most recently, a Queen's Award for Enterprise: Innovation – recognising Digital and cementing Aqualisa's reputation as true innovators.

Praise for products that we are rightly very proud of.

Aqualisa offer both HiQu and ilux digital bathroom technology to suit your showering and bathing needs.

At the heart of both the HiQu and ilux digital showering and bathing technology is the digital processor box. Once the bath or shower selection is made, hot and cold water flow into the processor where it is blended with thermostatic precision before flowing out and into the bath filler or shower head at the temperature and flow selected by the user.

Processor boxes are specific to the water systems of the bathroom, so you can choose one for a high pressure/combo boiler system or one that comes with an integral pump for gravity systems. A low voltage data cable, concealed out of sight, connects the processor to the shower or bath control.

## Digital Shower

Shower performance is second to none, providing a flow rate range capable of delivering a refreshing spritz, through to an invigorating drench. To conserve water or to ensure it will go further, select the 'eco-mode' on the processor box during installation. For super-quick installations choose an exposed shower which can be installed in as little as two hours with minimal mess and disruption to the bathroom.

A data cable connects the HiQu's shower controls to a digital processor, where hot and cold water are perfectly blended and delivered to the shower head at the desired temperature and flow.

The shower controls and optional remote control can each be sited up to 10 metres from the processor. This means that the processor can be placed in the loft, airing cupboard or under the bath, and the remote control can switch on the shower from a convenient location.

Aqualisa Digital Showers are suitable for most approved UK water systems. For homes with gravity water systems choose a Gravity shower system with integral pump. Performance can be enhanced in a home with a Gravity water system, by adding the powerful Ultimate 340 pump, particularly where a multiple outlet shower is being fitted.

### HiQu Digital Shower controls

HiQu Shower controls have a luxurious metal finish, and are very simple to use. They feature animated LEDs to show changes in temperature and flow.

## Digital Bath

HiQu Digital Bath brings sophistication to bathing, with its simple to use controls and three programmable depth pre-sets, plus an optional remote control which allows you to fill your bath from up to 10 metres away.

Controlled by a compact, remotely sited digital processor, HiQu Bath uses an overflow filler rather than bulky taps and comes with a top up feature which allows you to select a low flow top up at the push of a button if your bath is cooling down, or too hot.

Shallow fill, half fill and full fill selectors are etched onto the HiQu control. A simple start/stop button is all it takes to get your bath running and it stops once it has reached your chosen depth – so you can simply fill... and forget.

### HiQu Digital Bath controls

HiQu Bath features a depth function, which once set, allows you to fill a bath to your chosen depth and preferred temperature with just one touch of a button. As a safety feature, HiQu Bath has a 12 minute maximum run time, to prevent overflow.

Digital bathroom technology brings so many advantages – perfect showers at the touch of a button, baths filled to your chosen depth and warmth, delivering a sensational experience every time.

Intuitive controls feature illuminated displays that show when your desired temperature and flow have been reached. You can even fill your bath or switch on your shower by remote control.

### HiQu Digital processor box

Driven by Aqualisa's award winning digital technology, HiQu is controlled by a compact processor box which can be located 10 metres from the bathing area in the loft, airing cupboard or under the bath. It controls flow and blends hot and cold water with thermostatic precision, delivering perfect baths and showers every time. Remotely siting the processor box makes access and installation easy, eliminating the need for extensive excavation of the bathroom wall and damage to décor.

HiQu Digital processors are backed up by Aqualisa's 5 year manufacturer's guarantee.

Sophisticated and contemporary

# ilux®

## ilux Digital Shower:

From an eco shower to a deluge, pre-programmed or spontaneous, the intelligence of ilux allows you choose the shower to suit your mood with the touch of a button.

This shower's clever illuminated control even shows you when it's time to step in – so, no need to keep checking the temperature, just keep an eye on the lighting display, and when it stops oscillating, you know it's time to step in. The advanced technology means you don't even have to be in the bathroom. The remote control can be placed anywhere up to 10 metres from the shower, so you can switch it on and step into your selected pre-set shower when you are ready.

### Locating the processor

The processor box is slimline, compact and smaller than a shoebox. Reflecting the uniqueness of every bathroom, it offers the flexibility to be conveniently sited away from the showering or bathing area in an easily accessible location: under the bath, in the loft, in an airing cupboard, the choice is yours.

## ilux Digital Bath:

With ilux, you can control the temperature you bathe at, as well as how deep your tub gets. With three programmable pre-sets it's entirely up to you whether you enjoy an indulgent, luxurious laze or a quick cool dip.

For families, there's a child-locking function which will disable the controls for extra peace of mind. With ilux's 'fill and forget' option there's no need to worry about an accidental overflow. Plus, run out of hot water and ilux will switch off, saving you from jumping into a cold bath. ilux's clever remote technology means that you can programme the controller to suit your needs, locate it conveniently, and activate the bath with the remote. So, switch on whilst you have an extra snuggle in bed, extend an indulgent soak with the 'hot top-up', and as it's resistant to hot, steamy environments, if you lose the remote whilst bathing, it will even float to the surface.
